EDUCATION

University of California, Irvine

Expected Dec. 2026

Master of Computer Science, GPA 3.84

Irvine, CA

- Coursework: Parallel & Distributed Computing, Neural Networks & Deep Learning, Machine Learning & Data Mining, Algorithms, Network Security.

University of California, Irvine

Jun. 2025

B.S. Software Engineering, Minor in Health Informatics, GPA 3.70; Regents Scholar (4 years)

Irvine, CA

TECHNICAL SKILLS

Languages: Python, Java, C, C++, JavaScript, TypeScript, SQL

Backend & Full-Stack: Spring Boot, Spring Security, Node.js, Express, Flask, REST APIs, React, Vue.js, React Flow, Rete.js

Databases & Tools: Oracle, JDBC, HikariCP, Docker, Kubernetes, Git, Maven, Webpack, JUnit, vSphere

Machine Learning & AI: PyTorch, TensorFlow, Scikit-learn, DenseNet-121, ResNet-50, Ray Tune, Pandas, NumPy, retrieval-augmented generation ("RAG"), embeddings, LLM agents

EXPERIENCE

California Independent System Operator

Jun. 2026 – Present

Software Engineer, Contract

Folsom, CA

- Built and shipped a full-stack data lineage platform, migrating the Node.js/Express backend to Spring Boot 4 (Java 21, Oracle/JDBC, React Flow, WAR packaging); deployed company-wide and cut manual data tracing from 15 minutes to under 1 minute.
- Architected per-session routing across 5 Oracle environments with Spring AbstractRoutingDataSource, ThreadLocal context, and a servlet interceptor over lazily initialized HikariCP pools.
- Implemented two-tier role-based access control with Spring Method Security, server-side response filtering, and mirrored React route guards, closing gaps left by UI-only restriction.

NeuralSeek

Jul. 2025 – Sept. 2025

AI Agentic Builder Intern

Remote

- Designed and deployed two agents (fitness planner, review analyzer) turning natural-language input into structured, queryable output with embeddings, RAG, and prompt engineering; earned NeuralSeek Agent Certifications L1–L3.

Los Angeles Department of Water and Power

Aug. 2024 – Jun. 2025

Software Engineering Intern

Los Angeles, CA

- Engineered a multi-threaded Python service that pulled configs from 800+ Cisco devices in under 15 minutes, cross-referencing MAC, ARP, and routing tables into port-to-interface reports.
- Automated network documentation across 1,300+ nodes by BFS-traversing CDP neighbors into an interactive subnet topology snapshot, with SMTP alerting and per-device error isolation to preserve partial results.

Turion Space

Jan. 2025 – Mar. 2025

Software Engineering Intern

Irvine, CA

- Delivered a real-time visualization system streaming 500+ satellite telemetry points across 6 dashboards, used by 5+ operations engineers to monitor spacecraft health and identify anomalies.
- Built a drag-and-drop task management UI on a reusable React and Rete.js component framework, improving task efficiency 25% over CLI workflows and setting the front-end standard for later development.

PROJECTS

BLANT-Predict: Link Prediction as a Service | Java, Python, Flask, Docker, REST APIs

Jan. 2026 – Jun. 2026

- Led front-end development on a 4-person team, shipping a Cytoscape plugin in Java that exports a network, submits jobs to a containerized link prediction service, streams progress, and imports scored edges, replacing a CLI research tool.
- Built the results workflow with a predicted-edge table, confidence-based coloring, a filtering threshold slider, and checksum-keyed caching that returns prior results instead of recomputing.

Multi-Modal Skin Cancer Diagnostic System | PyTorch, ResNet-50, Ray Tune

Apr. 2026 – Jun. 2026

- Built a dual-branch fusion network (ResNet-50 vision encoder plus clinical MLP) on ISIC BCN20000, reaching 93.34% accuracy and 0.9334 F1 against an 89.35% vision-only baseline.
- Tuned each branch with Ray Tune and measured modality contribution by zeroing branch embeddings at inference, attributing a 39.3% drop in false-positive probability to clinical metadata.

Chest Radiograph Multi-Label Classification | PyTorch, DenseNet-121, ResNet-50

Jan. 2026 – Mar. 2026

- Fine-tuned DenseNet-121 end to end for multi-label detection of 14 thoracic conditions across 112,120 NIH chest X-rays, reaching 0.808 test AUROC and beating the ChestX-ray14 published baseline.
- Prevented leakage with patient-level 80/10/10 splits and per-class weighted BCEWithLogitsLoss for class imbalance, then benchmarked a stratified group K-fold ensemble (0.813 AUROC).
